A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2-25-04 has been entered.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lomneth et al in view of Adomako and Sagi taken together for reasons of record.

Lomneth discloses a margarine and water in oil emulsion that contains 30-65% soft fat and 35-70% hard fat. In embodiment 1 the aqueous phase is about 20% of the composition and the oil phase is 80% of the composition, column 28, lines 63-65. The hard fat is further stated to contain 32% to 50% SOS triglyceride. Embodiment 1 shows that the

aqueous phase and the fat phase are emulsified together to form the final product. The claims appear to differ from the reference in the suggestion that at least 5 wt% of the hardstock fat is Allanblackia fat or Pentadesma fat. Each of Sagi and Adomako teaches that Allanblackia fat and Pentadesma fat are known edible fats that contain substantial amounts of SOS triglycerides. These references especially teach that these fats are used as cocoa butter substitutes. Given the formulation of Lomneth that identifies selected triglycerides that include SOS, it would have been obvious to one of ordinary skill in the art to formulate a triglyceride product with hardstock from Allanblackia fat and Pentadesma fat. It is appreciated that the particular amount of this hard fat is not shown in the reference, but to vary the amount of this fat according to the extent of cocoa butter characteristics desired in the product would have been an obvious way to modify the overall taste of the final product. The use of hardstock from Allanblackia fat and Pentadesma fat is regarded to be an obvious substitute for an SOS triglyceride in water in oil emulsion.

This is a CPA of applicant's earlier Application No. 10/045,405. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the

next Office action if they had been entered in the earlier application.

Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
